| Hunting Health Care-Associated Infections from the Clinical Microbiology Laboratory: Passive, Active, and Virtual Surveillance<br>Lance R. Peterson and Stephen E. Brossette                                                                                                                                                                           | 1-4     |
| <b>BACTERIOLOGY</b>                                                                                                                                                                                                                                                                                                                                    |         |
| Comparison of Two Culture Methods for Detection of Tobramycin-Resistant Gram-Negative Organisms in the Sputum of Patients with Cystic Fibrosis<br>Jill M. Van Dalfsen, Jenny R. Stapp, Charles Phelps, Patricia Stewart, and Jane L. Burns                                                                                                             | 26-30   |
| Distribution of Clinically Relevant <i>Borrelia</i> Genospecies in Ticks Assessed by a Novel, Single-Run, Real-Time PCR<br>Carolin Rauter, Rainer Oehme, Isabel Diterich, Matthias Engele, and Thomas Hartung                                                                                                                                          | 36-43   |
| Detection of Meningococcal Carriage by Culture and PCR of Throat Swabs and Mouth Gargles<br>J. Zoe Jordens, Jeannette N. Williams, Graeme R. Jones, and John E. Heckels                                                                                                                                                                                | 75-79   |
| Immunochromatographic Strip Test for Rapid Detection of Diphtheria Toxin: Description and Multicenter Evaluation in Areas of Low and High Prevalence of Diphtheria<br>K. H. Engler, A. Efstratiou, D. Norn, R. S. Kozlov, I. Selga, T. G. Glushkevich, M. Tam, V. G. Melnikov, I. K. Mazurova, V. E. Kim, G. Y. Tseneva, L. P. Titov, and R. C. George | 80-83   |
| Multiplex LightCycler PCR Assay for Detection and Differentiation of <i>Bordetella pertussis</i> and <i>Bordetella parapertussis</i> in Nasopharyngeal Specimens<br>Lynne M. Sloan, Marlene K. Hopkins, P. Shawn Mitchell, Emily A. Vetter, Jon E. Rosenblatt, W. Scott Harmsen, Franklin R. Cockerill, and Robin Patel                                | 96-100  |
| Phylogeny-Based Rapid Identification of <i>Mycoplasmas</i> and <i>Ureaplasmas</i> from Urethritis Patients<br>Takashi Yoshida, Shin-Ichi Maeda, Takashi Deguchi, and Hiroaki Ishiko                                                                                                                                                                    | 105-110 |
| $\beta$ lasEN: Microdilution Panel for Identifying $\beta$ -Lactamases Present in Isolates of <i>Enterobacteriaceae</i><br>Christine C. Sanders, Anton F. Ehrhardt, Ellen Smith Moland, Kenneth S. Thomson, Barbara Zimmer, and Darcie E. Roe                                                                                                          | 123-127 |
| Importance of Local Variations in Antibiotic Consumption and Geographical Differences of Erythromycin and Penicillin Resistance in <i>Streptococcus pneumoniae</i><br>César García-Rey, Lorenzo Aguilar, Fernando Baquero, Julio Casal, and Rafael Dal-Ré                                                                                              | 159-164 |
| Evaluation of Four Commercial Immunoglobulin G (IgG)- and IgM-Specific Enzyme Immunoassays for Diagnosis of <i>Mycoplasma pneumoniae</i> Infections<br>J. Petitjean, A. Vabret, S. Gouarin, and F. Freymuth                                                                                                                                            | 165-171 |
| Recombinant Assay for Serodiagnosis of Lyme Disease Regardless of OspA Vaccination Status                                                                                                                                                                                                                                                              | 193-197 |

|                                                                                                                                                                                                                                                                                                                                                                                                                                   |         |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| Maria J. C. Gomes-Solecki, Gary P. Wormser, Martin Schriefer, Glenn Neuman, Laura Hannafey, John D. Glass, and Raymond J. Dattwyler                                                                                                                                                                                                                                                                                               |         |
| Quantitative Analysis of Mycobacterial and Propionibacterial DNA in Lymph Nodes of Japanese and European Patients with Sarcoidosis<br>Yoshinobu Eishi, Moritaka Suga, Ikuo Ishige, Daisuke Kobayashi, Tetsuo Yamada, Tamiko Takemura, Touichiro Takizawa, Morio Koike, Shoji Kudoh, Ulrich Costabel, Josune Guzman, Gianfranco Rizzato, Marcello Gambacorta, Ronald du Bois, Andrew G. Nicholson, Om P. Sharma, and Masayuki Ando | 198-204 |
| Evaluation of a Novel Heminested PCR Assay Based on the Phosphoglucosamine Mutase Gene for Detection of Helicobacter pylori in Saliva and Dental Plaque<br>C. Goosen, J. Theron, M. Ntsala, F. F. Maree, A. Olckers, S. J. Botha, A. J. Lastovica, and S. W. van der Merwe                                                                                                                                                        | 205-209 |
| Serotype Identification of Group B Streptococci by PCR and Sequencing<br>Fanrong Kong, Sonia Gowan, Diana Martin, Gregory James, and Gwendolyn L. Gilbert                                                                                                                                                                                                                                                                         | 216-226 |
| Phenotypic Variation of Helicobacter pylori Isolates from Geographically Distinct Regions Detected by Lectin Typing<br>Sean O. Hynes, Nathalie Broutet, Eurohepygast Study Group, Torkel Wadström, Marika Mikelsaar, Paul W. O'Toole, John Telford, Lars Engstrand, Shigeru Kamiya, Andreas F. Mentis, and Anthony P. Moran                                                                                                       | 227-232 |
| Polymorphisms of Helicobacter pylori HP0638 Reflect Geographic Origin and Correlate with cagA Status<br>T. Ando, R. M. Peek, D. Pride, S. M. Levine, T. Takata, Y.-C. Lee, K. Kusugami, A. van der Ende, E. J. Kuipers, J. G. Kusters, and M. J. Blaser                                                                                                                                                                           | 239-246 |
| Rapid Identification of Staphylococcus aureus Directly from Blood Cultures by Fluorescence In Situ Hybridization with Peptide Nucleic Acid Probes<br>Kenneth Oliveira, Gary W. Procop, Deborah Wilson, James Coull, and Henrik Stender                                                                                                                                                                                            | 247-251 |
| Assessment of Clarithromycin-Resistant Helicobacter pylori among Patients in Shanghai and Guangzhou, China, by Primer-Mismatch PCR<br>Zhi-Jun Pan, Wan-Wen Su, Guido N. J. Tytgat, Jacob Dankert, and Arie van der Ende                                                                                                                                                                                                           | 259-261 |
| Accurate, Noninvasive Detection of Helicobacter pylori DNA from Stool Samples: Potential Usefulness for Monitoring Treatment<br>Anthony P. Shuber, Jennifer J. Ascaño, Kevin A. Boynton, Anastasia Mitchell, Henry F. Frierson, Jr., Wa'el El-Rifai, and Steven M. Powell                                                                                                                                                         | 262-264 |
| Identification by 16S rRNA Gene Sequencing of Lactobacillus salivarius Bacteremic Cholecystitis<br>Patrick C. Y. Woo, Ami M. Y. Fung, Susanna K. P. Lau, and Kwok-Yung Yuen                                                                                                                                                                                                                                                       | 265-267 |
| Active Copper- and Zinc-Containing Superoxide Dismutase in the Cryptic Genospecies of Haemophilus Causing Urogenital and Neonatal Infections Discriminates Them from Haemophilus influenzae Sensu Stricto<br>Paul R. Langford, Brian J. Sheehan, Taheed Shaikh, and J. Simon Kroll                                                                                                                                                | 268-270 |

|                                                                                                                                                                                                                                                                                                                           |         |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| Direct Detection and Characterization of Shiga Toxigenic <i>Escherichia coli</i> by Multiplex PCR for <i>stx</i> <sub>1</sub> , <i>stx</i> <sub>2</sub> , <i>eae</i> , <i>ehxA</i> , and <i>saa</i><br>Adrienne W. Paton and James C. Paton                                                                               | 271-274 |
| Evaluation of a Strand Displacement Amplification Assay (BD ProbeTec-SDA) for Detection of <i>Neisseria gonorrhoeae</i> in Urine Specimens<br>Deniz Akduman, Josephine M. Ehret, Kimberly Messina, Sharron Ragsdale, and Franklyn N. Judson                                                                               | 281-283 |
| Reaction Difference Rule for Phage Typing of <i>Staphylococcus aureus</i> at 100 Times the Routine Test Dilution<br>Hazel M. Aucken and Kate Westwell                                                                                                                                                                     | 292-293 |
| Characterization of Enteropathogenic and Enteroaggregative <i>Escherichia coli</i> Isolated from Diarrheal Outbreaks<br>Jun Yatsuyanagi, Shioko Saito, Hiroyasu Sato, Yoshimichi Miyajima, Ken-Ichi Amano, and Katsuhiko Enomoto                                                                                          | 294-297 |
| Association of <i>cagA</i> and <i>vacA</i> Genotypes of <i>Helicobacter pylori</i> with Gastric Diseases in Estonia<br>Helena Andreson, Krista Lõivukene, Toomas Sillakivi, Heidi-Ingrid Maaros, Mart Ustav, Ants Peetsalu, and Marika Mikelsaar                                                                          | 298-300 |
| Antibiotic-Resistant Cell-Detaching <i>Escherichia coli</i> Strains from Nigerian Children<br>Iruka N. Okeke, Hartmut Steinrück, Kristen J. Kanack, Simon J. Elliott, Lars Sundström, James B. Kaper, and Adebayo Lamikanra                                                                                               | 301-305 |
