

INVESTIGACIÓN SOBRE SALUD REPRODUCTIVA EN EL INSTITUTO NACIONAL DE SALUD PÚBLICA

CENTRO DE INVESTIGACIÓN EN SALUD POBLACIONAL, INSP.

"Salud Reproductiva es un estado completo de bienestar físico, mental y social, no únicamente la ausencia de enfermedades o afecciones del Sistema Reproductivo en todas las etapas de la vida; implica que las personas sean capaces de tener una vida sexual responsable, satisfactoria y segura, asimismo, tener la capacidad de reproducirse y la plena libertad para decidir cuándo y con qué frecuencia hacerlo. OMS"

Octubre -2011

EL FRUTO DE LA INVESTIGACIÓN

SALUD REPRODUCTIVA

En el Instituto Nacional de Salud Pública se han identificado algunas líneas de investigación prioritarias cuya misión principal es ayudar a resolver los principales problemas de Salud Pública en México, mediante la conformación de grupos multidisciplinarios de investigadores expertos en los problemas identificados con el objetivo de generar y divulgar la evidencia científica creada a partir de una investigación de certeza y calidad cuyos resultados generen estudios exitosos de planeación–prevención–control y estrategias costo-efectivas novedosas, mismas que podrán ser utilizadas no solamente por la comunidad científica o tomadores de decisiones en México, sino también a nivel internacional.

Identificadas en 2007 y consolidadas en el 2008, las líneas de investigación tienen como uno de sus objetivos fundamentales el de transmitir el conocimiento generado de sus investigaciones, a través de artículos científicos publicados en revistas de calidad indexadas en diferentes fuentes de información, además de libros y capítulos de libros.

Cada una de las Líneas de Investigación cuenta con límites bien establecidos de tópicos preferentes de estudio, a pesar de ello, estos temas tienen fronteras mucho más amplias que son abarcadas por las otras líneas, lo cual hace de todas las LIM en su conjunto un complemento adecuado de colaboración e intercambio de conocimientos cuyo objetivo fundamental es el de apuntalar al INSP como líder mundial en esta área tan importante que es la Salud Pública.

Salud Reproductiva es la Línea de Investigación por Misión número 15, identificada como problema relevante de Salud Pública por la Comisión Académica de Investigación del INSP, tiene como núcleo principal de investigación 3 componentes primarios: La *Salud Reproductiva del Adolescente*; la *Morbimortalidad Materna y Perinatal* y la *Salud Reproductiva del Adulto*. En el presente documento, a través del análisis de citas a los trabajos en conjunto del INSP relacionados a este tema, se puede observar cual es el vínculo, complemento e interrelación con las LIM *Salud Ambiental* (LIM 5) y *Desnutrición* (LIM 14) que convergen principalmente en este estudio a través de otros factores de riesgo externos como los ambientales y los nutricionales que afectan la Salud Reproductiva Humana, dando como resultado la obtención de indicadores bibliométricos de la producción científica dentro del INSP.

Además de las líneas de investigación mencionadas y correlacionadas con la Salud Reproductiva se encuentran otras vinculadas directamente a la misma con temática de Cáncer, SIDA-ITS y otras; por lo que se incluyeron los artículos correspondientes para su análisis citográfico.

ÍNDICE

<i>El Fruto de la Investigación</i>	1
<i>Análisis Citográfico.....</i>	3
<i>Artículos seleccionados con temática en Salud Reproductiva.....</i>	4 - 8
<i>Artículos seleccionados con temática en Salud Ambiental – Salud Reproductiva.....</i>	9 - 11
<i>Artículos seleccionados con temática en Desnutrición – Salud Reproductiva.....</i>	12 - 13
<i>Artículos más citados.....</i>	14 - 17
<i>Temática consultada.....</i>	18 - 21
<i>Revistas en las cuales fueron citados los investigadores del INSP</i>	22 - 23
<i>Revistas donde se publicaron los artículos que citan la producción científica del INSP</i>	24 - 25
<i>Investigación sobre Salud Reproductiva en México</i>	26 - 29
<i>El nacimiento del ingrediente activo de la píldora anticonceptiva en México.....</i>	30 - 32
<i>Citografía.....</i>	33 -281
<i>Créditos.....</i>	282

ANÁLISIS CITOGRÁFICO

Para la preparación de este análisis se buscaron artículos de 1999 a 2010 con temática en Salud Reproductiva, siendo el SIID la fuente de recuperación de la producción del INSP, se seleccionaron aquellos artículos que tuvieron al menos 1 cita y que cumplieron los criterios de contenido temático para ser incluidos en este análisis, obteniéndose 148 artículos en total, mismos que fueron distribuidos de la siguiente manera:

1. Salud Reproductiva, incluyendo las relacionadas con Cáncer, SIDA-ITS, 77 artículos ([tabla 1](#))
2. Salud Ambiental - Salud reproductiva , 50 Artículos ([tabla 2](#))
3. Desnutrición - Salud Reproductiva, 21 artículos ([tabla 3](#))

De la combinación de todas las tablas se obtuvo 1 tabla concentrada:

4. Artículos con mas citas en total (14 o más citas). ([tabla 4](#))

Se obtuvieron 1930 citas en total del 2009 al 2010 ([ver citografía](#)).

Del análisis de la citografía recuperada se obtuvieron los siguientes indicadores bibliométricos: Preferencia temática consultada por los investigadores externos nacionales e internacionales, revistas que más aportaron evidencia del apoyo resaltable de la investigación científica del INSP, nivel de las revistas, país de publicación de las revistas, artículos con más citas en total ([tabla 4](#)), Investigadores del INSP que trabajan en ese campo así como sus líneas y sublíneas temáticas de preferencia.

Tabla 1: ARTÍCULOS SELECCIONADOS CON TEMÁTICA EN SALUD REPRODUCTIVA

Se incluyeron los relacionados a cáncer, SIDA-ITS y otros.

INVESTIGACIÓN SOBRE SALUD REPRODUCTIVA EN EL INSTITUTO NACIONAL DE SALUD PÚBLICA

TEMÁTICA CONSULTADA

Imagen: www.cambialo.org

Imagen: spaciolibre.net

Metalúrgica Doe Run en La Oroya, Perú, de su chimenea, emanaban diariamente (hasta el 2009) vapores de plomo y dióxido de azufre. De acuerdo a un estudio (Pebe G. et al. Rev Peru Med Exp Salud Pública 2008) el promedio de plomo en sangre de una muestra de 93 recién nacidos entre el 2004 y el 2006 en este lugar fue de 8,84 µg/dL, de estos, el 23% tuvo más de 10 µg/dL.

SALUD REPRODUCTIVA - SALUD AMBIENTAL.

Plomo:

Derivado de su fácil maleabilidad y fusión y de su presencia en forma natural en la corteza terrestre, el plomo es un metal que ha sido utilizado de distintas formas desde hace mucho tiempo; en 1998 México ocupaba uno de los principales lugares a nivel mundial como productor de este elemento, sus principales usos eran como materia prima para la industrias de acero, hierro, papel, textil y cerámica así como en pinturas, juguetes, alfarería y gasolinas entre otros.

Hoy en día el uso del plomo ha sido limitado por considerarse un contaminante ambiental altamente tóxico para la salud del ser humano. La exposición a este metal durante el embarazo trae como consecuencias: el origen de trastornos en el desarrollo fetal, complicaciones en el embarazo y en el parto, dejando secuelas aún mucho después del nacimiento. Los estudios más consultados que se han realizado sobre la salud reproductiva y el plomo dentro del INSP son:

- Los efectos de la exposición prenatal a este metal sobre: el desarrollo intelectual y psicomotor de los niños; su neurotoxicidad fetal; parto pretérmino y aborto espontáneo.
- La medición de niveles de plomo en hueso materno y la relación con niveles circundantes en la sangre durante el embarazo y lactación.
- La presencia de plomo en sangre materna, medidos en cada trimestre del embarazo como predictor de disminución en el desarrollo mental del infante.

- El incremento de la hipertensión y presión sanguínea durante el embarazo asociadas al incremento de plomo en sangre.
- Los efectos de los suplementos de calcio sobre la disminución de plomo en sangre en mujeres lactantes.
- La carga del plomo materno y los efectos sobre el peso del lactante; y el efecto del plomo en el hueso materno sobre la longitud y circunferencia de la cabeza del recién nacido.

Plaguicidas:

Otro tema relevante para los investigadores externos en el área de contaminantes ambientales son los efectos tóxicos de los plaguicidas sobre la función reproductiva, primordialmente sobre la fertilidad masculina, también su influencia nociva sobre los trastornos en el desarrollo fetal y complicaciones durante el embarazo.

Los subtemas más consultados son:

- Las investigaciones de los efectos tóxicos de los compuestos organofosforados, utilizados en la agricultura mexicana, sobre la calidad y cantidad del líquido espermático de los trabajadores agrícolas; así como también sus efectos nocivos sobre las hormonas folículo estimulante y luteinizante.
- Otros agentes tóxicos de interés que actúan como disruptores endocrinos son los plaguicidas organoclorados, específicamente el Dicloro-Difenil-Tricloroetano (DDT) y el Diclorodifenil-Dicloro-Etileno (DDE) metabolito mayor del primero. Las investigaciones principales sobre estos elementos tóxicos son los que asocian su exposición ambiental a la disminución de la función testicular y de las hormonas reproductivas masculinas. El estudio de algunas variables reproductivas y el riesgo de cáncer de mama asociadas a la exposición de DDE en mujeres postmenopáusicas principalmente. Otro subtema es el efecto que existe entre la exposición “in útero” a organoclorados sobre el desarrollo fetal; el parto prematuro y el neurodesarrollo del infante.

Otros:

- Ftalatos asociados a parto pretérmino.

SALUD REPRODUCTIVA Y DESNUTRICIÓN.

La desnutrición materna constituye el problema principal en los países en vías de desarrollo más pobres generando una elevada prevalencia de bajo peso al nacer y retardo de crecimiento fetal considerándose un factor de riesgo importante para la morbilidad y mortalidad perinatal.

Para abordar y prevenir este problema en México, se ha motivado a buscar y mejorar esta condición a través de la suplementación dietética nutricional esencial durante la fertilidad y el embarazo, convirtiéndose en una fuente de apoyo inagotable para el mejoramiento

del éxito reproductivo en el ser humano, sobre todo si lo anterior viene ligado a un estilo de vida saludable.

Los artículos más demandados en el área de nutrición fueron:

Nutrientes en el embarazo:

- Los micronutrientes múltiples en comparación con el hierro como único nutriente, en la prevención del bajo peso al nacer y la anemia en mujeres embarazadas.
- El papel del almacenamiento de hierro y folato antes del embarazo y su relación con la incidencia de anemia en mujeres embarazadas usando como valores predictivos la ferritina sérica y el folato eritrocitario.
- La anemia en mujeres embarazadas y no embarazadas como problema de salud pública.
- Evaluación de ingesta dietética de ácidos grasos poliinsaturados, principalmente de cadena larga n-3, durante el embarazo y el papel de estos sobre el neurodesarrollo y peso al nacer del infante.
- Influencia de la nutrición materna durante el embarazo sobre el desarrollo y crecimiento del feto.

SALUD REPRODUCTIVA (Incluye temática de Cáncer y SIDA e ITS):

Los subtemas más consultados sobre aspectos reproductivos en general son:

- Los factores reproductivos asociados al cáncer endometrial, al cáncer de ovario y a la infección por HPV.
- Medición de la distancia anogenital en recién nacidos.
- Historia reproductiva y uso de anticonceptivos orales relacionados a la infección por HPV.
- La correlación entre el conocimiento y experiencia de la anticoncepción de emergencia y el incremento del uso del condón.
- Embarazo no deseado y utilización de métodos anticonceptivos subsecuentes.

- Los aspectos sociales y culturales de las mujeres que las hace vulnerables ante la epidemia del VIH SIDA.
- El papel de los suplementos de calcio sobre la reducción de la resorción ósea materna durante el embarazo.

Imagen: panos.org.uk

- Factores relacionados con el uso del condón en jóvenes; perfil del comportamiento sexual en esta edad; evaluación de la efectividad de los programas de prevención contra el VIH/SIDA; así como factores de riesgo para desarrollar o adquirir una enfermedad crónica o problemas reproductivos en la adolescencia.
- El tiempo dedicado a la práctica de algún deporte o ejercicios como actividad física por parte de las mujeres mexicanas en edad reproductiva.
- Autopsia verbal para determinar las causas de mortalidad materna.
- Conocimientos y actitudes de las mujeres en edad reproductiva hacia el tamizaje de cáncer cervical.
- Detección de HPV y factores de riesgo asociados que existen entre las mujeres embarazadas y las no-embarazadas.
- La información oportuna sobre métodos de planificación familiar y de factores de riesgo para la adquisición de infecciones de transmisión sexual como herramienta para la elección del método anticonceptivo más seguro en mujeres para ambos aspectos.
- Condiciones de trabajo ambulante de la mujer como factor de riesgo para presentar hijos con bajo peso al nacer.

SOBRE LAS REVISTAS CIENTÍFICAS

I. REVISTAS EN LAS CUALES FUERON CITADOS LOS INVESTIGADORES DEL INSP

Fueron 76 títulos localizados en este rubro, de ellos, 32 aparecen con mayor preferencia entre los investigadores del INSP, ([tabla 5](#)). Es importante resaltar que las primeras 7 revistas obtuvieron el 51.03% (985) de citas, más de la mitad del total, siendo la revista "*Salud Pública de México*", publicación oficial de este Instituto, quien integra una proporción importante de esta producción, siguiendo en orden de preferencia la Revista "*Environmental Health Perspectives*" especializada en aspectos ambientales. Referente a la especialidad de cada revista observamos que de las 32 visibles; 7* se enfocan a salud ambiental, 5* a nutrición y 3* a temas reproductivos.

INVESTIGACIÓN SOBRE SALUD REPRODUCTIVA EN MÉXICO

Cuando mencionamos Salud Reproductiva, generalmente asociamos esta especialidad con sus componentes directos: Planificación familiar, fertilidad, anticoncepción, atención materno-infantil, historia reproductiva, embarazo, sexualidad, infertilidad y menopausia; así como algunos aspectos de enfermedades de transmisión sexual, violencia intrafamiliar y cánceres ginecológicos sobre todo cuando estos atentan contra el aparato reproductor o contra los procesos reproductivos; al concluir la revisión citográfica se visualizan también los otros componentes externos mencionados e implicados en este tema (medio ambiente y nutrición). Después de analizar el presente documento en cuanto a la producción científica del INSP sobre este referente, se concluye que los aspectos relacionados a Salud Pública han sido cubiertos por las diferentes Líneas de Investigación mencionadas, principalmente: “**Salud Reproductiva**”, “**Salud Ambiental**” y “**Desnutrición**”. De manera alterna se realizó una breve revisión en PubMed de los últimos 6 años, sobre investigación básica y clínica de aspectos reproductivos realizada en México con el propósito de conocer qué temas han sido objeto de estudio en nuestro país por autores de otras instituciones, algunos de ellos incluso, han participado de manera activa en colaboración con los investigadores del INSP. Con esta revisión se obtuvieron los tópicos más investigados y el nombre de los autores con mayor presencia en esta área.

Investigadores que trabajan en Temas Selectos de Reproducción Humana en México.

Pre-eclampsia; Eclampsia; Síndrome de Hellp.

Alfredo Leaños Miranda. – Hospital Gabriel Mancera; IMSS.

Ana Bertha Zavalza Gómez. – Hospital de Ginecología y Obstetricia del CM de Occidente; Guadalajara, Jal.

Ana Carolina Ariza. – Instituto Nacional de Ciencias Médicas y Nutrición “Salvador Zubirán”; SSA.

Arturo Zárate. – Hospital de Especialidades del CMN “Siglo XXI”; IMSS.

Gustavo Romero Gutiérrez. – Hospital de Ginecopediatría No. 48; IMSS. Guanajuato, México.

Elly Natty Sánchez Rodríguez. – Facultad de Química. UNAM.

Felipe Vadillo Ortega. – Depto. de Medicina Experimental, Facultad de Medicina; UNAM.

Jesús Carlos Briones Garduño. – Unidad de Investigación del Instituto Materno Infantil del Estado de México.

Juan Fernando Romero Arauz. – Hospital de Ginecología y Obstetricia de México, “Luis Castelazo Ayala”; IMSS.

Juan Gustavo Vázquez Rodríguez. – Hospital de Ginecología y Obstetricia No. 3, CMN “La Raza”; IMSS.

Marcelino Hernández Valencia. – Hospital de Especialidades del CMN “Siglo XXI”; IMSS.

María Guadalupe Veloz Martínez. - Hospital de Ginecología y Obstetricia No. 3, CMN “La Raza”; IMSS.

Thelma Canto Cetina. – Centro de Investigaciones Regionales “Dr. Hideyo Noguchi”; Mérida, Yucatán.

Diabetes Gestacional.

Ana Bertha Zavalza Gómez. – Hospital de Ginecología y Obstetricia del CM de Occidente; Guadalajara, Jal.

Arturo Zárate. – Hospital de Especialidades del CMN “Siglo XXI”; IMSS.

Carlos Ortega González. - Instituto Nacional de Perinatología; SSA.

Enrique Reyes Muñoz. - Instituto Nacional de Perinatología; SSA.

Gerardo Forbasch Sánchez. – Hospital de Ginecoobstetricia “Dr. Gerardo Morones”; IMSS; Monterrey, N.L.

Marcelino Hernández Valencia. – Hospital de Especialidades del CMN “Siglo XXI”; IMSS.

María Martha Vela Huerta. – Depto. De Neonatología, Hospital de Ginecología y Obstetricia; IMSS; León, Gto.

Margie Balas Nakash. – Instituto Nacional de Perinatología; SSA.

Otilia Perichart Perera. - Instituto Nacional de Perinatología; SSA.

Ricardo J. Hernández Herrera. – Hospital de Ginecoobstetricia “Dr. Gerardo Morones”; IMSS; Monterrey, N.L.

Enfermedades Infecciosas y Parasitarias (VIH, toxoplasmosis, vaginosis bacterial)

Cosme Alvarado Esquivel. – Facultad de Medicina de la Universidad Juárez; Durango, Mex.

Gustavo Romero Gutiérrez. – Hospital de Ginecopediatría No. 48; IMSS. Guanajuato, México.

Irma Cañedo Solares. – Instituto Nacional de Pediatría, SSA.

Laura Díaz Cueto - Hospital de Ginecología y Obstetricia de México, “Luis Castelazo Ayala”; IMSS.

María Hernández Trejo. – Instituto Nacional de Perinatología; SSA.

Rolando M. Viani. – Depto. de Pediatría, Facultad de Medicina, Universidad de California; San Diego, Ca. US.

Complicaciones Cardiovasculares.

Carmen Armida Iñigo Riesgo. – Hospital de Ginecología y Obstetricia del CM de Occidente; Guadalajara, Jal.

Luis Guillermo Torres Gómez. – Hospital de Ginecología y Obstetricia del CM de Occidente; Guadalajara, Jal.

Cáncer Ginecológico - Embarazo.

Agustín Avilés. – Hospital de Oncología CMN “Siglo XXI”; IMSS.

Carlos Eduardo Aranda Flores. – Hospital Ángeles del Pedregal; México.

José Francisco Gallegos Hernández. - Hospital de Oncología, CMN “Siglo XXI”; IMSS.

Marco Antonio Terán Porcayo. – Instituto Estatal de Cancerología “Arturo Beltrán Ortega”; Acapulco, GRO.

Ruptura Prematura de Membranas; Parto Pretérmino

Carlos Antonio Tapia Rombo. – Hospital Gral. Dr. Gaudencio González Garza, CMN “La Raza”, IMSS.

Esther Casanueva. – Instituto Nacional de Perinatología; SSA.

Felipe Vadillo Ortega. – Depto. de Medicina Experimental, Facultad de Medicina; UNAM.

Fred Morgan Ortiz. – Coordinación Universitaria del Hospital Civil de Sinaloa.

Guadalupe Estrada Gutiérrez. – Instituto Nacional de Perinatología; SSA.

Juan Fernando Romero Arauz. – Hospital de Ginecología y Obstetricia de México, “Luis Castelazo Ayala”; IMSS.

Laura Díaz Cueto. - Hospital de Ginecología y Obstetricia de México, “Luis Castelazo Ayala”; IMSS.

Nardhy Gómez López. – Instituto Nacional de Perinatología; SSA.

Rebeca Monroy Torres. – Departamento de Medicina y Nutrición, Universidad de Guanajuato; Guanajuato.

Membranas Extraembrionarias; Desarrollo Fetal; Ultrasonografía Fetal.

Edgar Hernández Andrade. – Instituto Nacional de Perinatología; SSA.

Felipe Vadillo Ortega. – Departamento de Medicina Experimental, Facultad de Medicina; UNAM.

Guadalupe Estrada Gutiérrez. – Instituto Nacional de Perinatología; SSA.

Guadalupe García López. – Instituto Nacional de Perinatología; SSA.

Jesús Andrés Benavides Serralde. – Instituto Nacional de Perinatología; SSA.

Nardhy Gómez López. – Instituto Nacional de Perinatología; SSA.

Ricardo J. Hernández Herrera. – Hospital de Ginecoobstetricia “Dr. Gerardo Morones”; IMSS; Monterrey, N.L.

Rogelio Cruz Martínez. – Depto. de Medicina Materno-Fetal, Hospital IDIBAPS, Universidad de Barcelona.

Rodrigo Vega Sánchez. – Instituto Nacional de Perinatología; SSA.

Verónica Zaga Clavelina. – Instituto Nacional de Perinatología; SSA.

Infertilidad; Disfunciones Sexuales; Técnicas de Reproducción; Hormonas Relacionadas a la Función Reproductiva; Capacitación Espermática.

Alberto Darszon. – *Instituto de Biotecnología; UNAM; Cuernavaca, Mex.*

Alberto Kably Ambe. – *Hospital Ángeles; México.*

Alfredo Leaños Miranda. – *Hospital Gabriel Mancera; IMSS.*

Alfredo Ulloa Aguirre. -- *Hospital de Ginecología y Obstetricia de México, "Luis Castelazo Ayala"; IMSS. (INSP)*

Armando Juárez Bengoa. – *Instituto Nacional de Perinatología; SSA.*

Carlos Villanueva Díaz. – *Instituto Nacional de Perinatología; SSA.*

Eusebio Rubio Auriolos. – *Asociación Mexicana para la Salud Sexual (AMSSAC); México.*

Gerardo A. de Blas. – *Instituto de Biotecnología; UNAM; Cuernavaca, Mex.*

José Alberto Álvarez Díaz. – *Facultad de Medicina, Universidad Complutense de Madrid; España.*

José Alaniz Fuentes. – *Hospital General "Dr. Manuel Gea González"; SSA.*

Juan Carlos Barros Delgadillo. – *Instituto Nacional de Perinatología; SSA.*

Julian Ruiz Anguas. – *Hospital Ángeles de las Lomas; Estado de México.*

Gerardo Barroso. – *Instituto Nacional de Perinatología; SSA.*

Marcelino Hernández Valencia. – *Hospital de Especialidades del CMN "Siglo XXI"; IMSS.*

Martha Durand. – *Instituto Nacional de Ciencias Médicas y Nutrición "Salvador Zubirán"; SSA.*

Raúl Eduardo Piña Aguilar. – *Facultad de Medicina, Universidad Autónoma de Yucatán; Mérida, Yuc.*

Victor Saúl Vital Reyes. – *Hospital de Ginecología y Obstetricia No. 3, CMN "La Raza"; IMSS.*

Victor Torres Flores. - *Departamento de Farmacología, Facultad de Medicina; UNAM.*

Aberraciones Cromosómicas.

Elva I. Cortés Gutiérrez. - *Centro de Investigación Biomédica del Noreste; IMSS; Monterrey, N.L.*

Juan Pablo Meza Espinoza. - *Universidad Autónoma de Tamaulipas; Matamoros, Tamaulipas.*

Climaterio; Menopausia; Postmenopausia; Terapia con Estrógenos.

Arturo Zárate. – *Hospital de Especialidades del CMN "Siglo XXI"; IMSS.*

Francisco Morales Carmona. – *Instituto Nacional de Perinatología; SSA.*

Lourdes Basurto. – *Unidad de Invest. Med. en Enf. Endocrinas, Diabetes y Metabol. del CMN "Siglo XXI"; IMSS.*

Marcelino Hernández Valencia. – *Hospital de Especialidades del CMN "Siglo XXI"; IMSS.*

María Antonia Basavilvazo Rodríguez. – *Hospital de Ginecología y Obstetricia No. 3, CMN "La Raza"; IMSS.*

María Luisa Marván Garduño. – *Instituto de Investigaciones Psicológicas, Universidad Veracruzana.*

Mónica Flores Ramos. – *Instituto Nacional de Perinatología; SSA.*

Renata Saucedo García. – *Unidad de Investigación Médica de Enfermedades Endocrinas e Inmunología; CMN; IMSS.*

Sebastian Carranza Lira. -- *Hospital de Ginecología y Obstetricia de México, "Luis Castelazo Ayala"; IMSS.*

Thelma Canto Cetina. – *Centro de Investigaciones Regionales "Dr. Hideyo Noguchi"; Mérida, Yucatán.*

Vitelio Velasco Murillo. - *Dirección de Prestaciones Médicas. Coordinación de Salud Reproductiva; IMSS.*

Síndrome Metabólico y Posmenopausia.

Margie Balas Nakash. – *Instituto Nacional de Perinatología; SSA.*

Anomalías Fetales. Anomalías Congénitas. Enfermedades del Recien Nacido.

Gerardo Álvarez. - Facultad de Medicina, Universidad de Sonora; Hermosillo, Son.

Gustavo Romero Gutiérrez. - Hospital de Ginecopediatría No. 48; IMSS. Guanajuato, México.

Heladia Joséfa García. - Hospital de Pediatría, CMN "Siglo XXI"; IMSS.

Lorenzo Osorno Covarrubias. - Centro Médico Nacional "Ignacio García Téllez"; Mérida, Yucatán.

Ricardo J. Hernández Herrera. - Hospital de Ginecoobstetricia "Dr. Gerardo Morones"; IMSS; Monterrey, N.L.

Vitelio Velasco Murillo. - Dirección de Prestaciones Médicas. Coordinación de Salud Reproductiva; IMSS.

Plaguicidas.

Lea A. Cupul Uicab. - National Institute of Environmental Health Sciences, NIH; USA:

Margarita Herrero Mercado. - Universidad de Veracruz; Jalapa, Veracruz.

Rogelio Recio Vega. - Facultad de Medicina de la Universidad Autónoma de Coahuila.

Stefan M. Waliszewsky. - Instituto de Medicina Forense, Universidad de Veracruz; Boca del Río, Ver.

Planificación Familiar; Anticoncepción. Aborto.

Diana Lara. - Population Council; México.

Enrique Rosales Aujang. - Hospital Gral. de Zona No. 2; Aguascalientes.

José Alberto Álvarez Díaz. - Facultad de Medicina, Universidad Complutense de Madrid; España.

Martha Durand. - Instituto Nacional de Ciencias Médicas y Nutrición "Salvador Zubirán"; SSA.

Rafaela Schiavon. - IPAS; México

Sandra G. García. - Population Council; México.

Adolescentes: Embarazo; Trastornos Alimenticios; Menarca; Menstruación.

Claudia Unikel Santoncini. - Instituto Nacional de Psiquiatría "Ramón de la Fuente Muñiz"; SSA.

Héctor Oviedo Cruz. - Instituto Nacional de Perinatología; SSA.

Josefina Lira Plascencia. - Instituto Nacional de Perinatología; SSA.

Juan Manuel Mancilla Díaz. - Laboratorio de Trastornos Alimenticios; UNAM - FES Iztacala.

María Luisa Marván Garduño. - Instituto de Investigaciones Psicológicas, Universidad Veracruzana.

Mario Iván Ortiz. - Laboratorio de Farmacol. Inst. de Ciencias de la Salud, Universidad Autónoma del Edo de Hidalgo.

Rosa Olivia Méndez Estrada. - Centro de Investigación en Alimentación y Desarrollo; A.C. Hermosillo, Sonora.

Nutrición (Desnutrición) - Salud Reproductiva

Esther Casanueva. - Instituto Nacional de Perinatología; SSA.

Graciela Caire Juvera. - Centro de Investigación en Alimentación y Desarrollo; A.C. Hermosillo, Sonora.

Margie Balas Nakash. - Instituto Nacional de Perinatología; SSA.

Margarita Levario Carrillo. - Unidad de Investigación Médica en Epidemiología Clínica; IMSS; Chihuahua, Chih.

Martha Vela Huerta. - Depto. Neonatología, Hospital Ginecología y Obstetricia; IMSS; León, Gto.

Otilia Perichart Perera. - Instituto Nacional de Perinatología; SSA.

Rebeca Monroy Torres. - Depto. de Medicina y Nutrición, Div. Ciencias de la Salud; Universidad de Guanajuato.

Rosa Olivia Méndez Estrada. - Centro de Investigación en Alimentación y Desarrollo; A.C. Hermosillo, Sonora.

Contribución Mexicana a la Reproducción Humana

El nacimiento del ingrediente activo de la píldora anticonceptiva en México.

Uno de los acontecimientos históricocientíficos en México en el ámbito de la reproducción humana, se dio a principios de la década de los cincuenta, por medio de la colaboración entre el Instituto de Química de la UNAM y la compañía Syntex fundada en 1944 (1). Derivado de esta interacción, en 1948 Luis Miramontes Cárdenas un joven egresado de la Escuela Nacional de Ciencias Químicas quien trabajaba en el Instituto de Química por invitación del Dr. Fernando Orozco al considerarlo un alumno sobresaliente en el campo experimental de la Química Orgánica (2), se incorpora a colaborar en Syntex con un grupo de investigadores mexicanos y extranjeros entre ellos Carl Djerassi y Jorge Rosenkranz (vicepresidente y director de investigación respectivamente de esta empresa) quienes coordinaban dos proyectos de investigación simultáneos: uno, sintetizar corticosteroides, el otro, lograr sintetizar 19-nor-esteroides; proyecto donde Luis Miramontes comenzó a colaborar presentando resultados sorprendentes y notables el 15 de octubre de 1951 al obtener por primera vez la síntesis de la hormona 19-nor-17-a-etiniltestosterona, compuesto con alto potencial progestacional después conocida comercialmente como noretisterona o noretindrona. Ese mismo año se obtuvo la patente mexicana del compuesto, otorgada a: Luis Miramontes - Carl Djerassi y Jorge Rosenkranz de la compañía química mexicana Syntex S.A. Posteriormente, el primero de mayo de 1956, se concedió la patente en Estados Unidos, llevándose a cabo los estudios toxicológicos y clínicos en la Worcester Foundation for Experimental Biology en Massachusetts por el endocrinólogo Gregory Pincus, Min Chueh Chang y el Ginecólogo John Rock, con el fin de desarrollar una píldora anticonceptiva; el financiamiento fue a través de Catherine Dexter McCormick, promovido por el entusiasmo de la Sra. Margaret Sanger una ferviente activista de los derechos de la mujer. La Food and Drug Administration aprobó en 1960 la comercialización de la píldora apareciendo "Norlutin" con el compuesto de Syntex. (3,4). La noretindrona hasta el día de hoy sigue siendo uno de los ingredientes activos de los anticonceptivos orales que son utilizados por millones de mujeres en el mundo como método de planificación familiar.

Rosenkranz con su personal de Syntex y el tubérculo de cabeza de negro, materia prima para la síntesis de la cortisona.

Ingeniero Químico Luis Ernesto Miramontes Cárdenas (1925-2004)

Imagen: Luis E. Miramontes Cárdenas. Memoria gráfica, sitio oficial. Instituto de Física, UNAM.

Luis Ernesto Miramontes Cárdenas nació en Tepic Nayarit el 16 de marzo de 1925, estudió el bachillerato en el plantel uno de la Escuela Nacional Preparatoria, obtuvo la Licenciatura en Ingeniería Química en la Escuela Nacional de Ciencias Químicas, fue cofundador del Instituto de Química de la UNAM donde cursó los estudios de doctorado laborando en el área de Química Orgánica. Su trayectoria profesional incluye; varias investigaciones publicadas, patentes nacionales e internacionales, recibió reconocimientos y premios por su aportación científica. Luis Miramontes Cárdenas fallece en la ciudad de México el 13 de septiembre del 2004. (5)

En el 2003 se consideró a la noretisterona como una de las 17 moléculas más importantes en la historia del ser humano. En el 2006 fue enlistada por la revista Galileu, como una de las 10 sustancias químicas más revolucionarias en la historia del hombre. (4)

La patente se encuentra en el Salón Nacional de la Fama al lado de Louis Pasteur, Thomas Alva Edison, Alexander Graham Bell y otros científicos de gran envergadura (4)

(Der.) Luis E. Miramontes, en presencia de George Rosenkranz recibe del rector de la UNAM Juan Ramón de la Fuente, un reconocimiento en el 50 aniversario de la síntesis de noretisterona. (2001)

Dr. Luis Ernesto Miramontes Cárdenas
Mural del Palacio de Gobierno en Tepic

Imagen: www.nayaritas.net

"Yo no soy el inventor de la píldora anticonceptiva, el inventor fue el Dr. Gregory Pincus; yo soy el descubridor del compuesto químico que originó la mencionada píldora. Algunos dicen que somos los padres de la píldora, no los inventores."

"La aparición de los anticonceptivos modernos presentó una opción para la generación de una conducta humana: la paternidad responsable"

"Su objetivo no fue ni es coartar la necesidad anímica e instintiva de la procreación, simplemente ha dado a la pareja la capacidad de prever, determinar y procurar las condiciones propicias para la formación de la familia."

"La píldora anticonceptiva pone también a nuestro alcance el cumplimiento de una responsabilidad mayor; la preservación de nuestro mundo ecológico, nuestro planeta casa."
L.M.C.[3]

PLANTAS MEXICANAS COMO FUENTE DE ESTEROIDES

Marker E. Russell Pionero de la industria de los esteroides

En 1941 llegó a México Russell E. Marker químico y profesor de la universidad de Pennsylvania (Rev Soc Quim 2001) (4) convencido de que la materia prima para la industria de las hormonas esteroides se podría obtener de algunas plantas abundantes en México como la dioscorea "cabeza de negro" y la discorea composita o "barbasco" de mayor importancia comercial por su contenido en diosgenina, inicio sus investigaciones en botánica y química orgánica aislando una sapogenina de la zarzaparrilla (*Smilax aristolochiaefolia*),

transformando esta última en pregnenolona; utilizó el mismo procedimiento para obtener, diosgenina a partir de un extracto de *Dioscorea tokoro*. A este procedimiento químico para transformar la pregnenolona en progesterona se le llamó "Degradación de Marker". En 1943 Marker había encontrado la forma de producir grandes cantidades de progesterona a un bajo costo para industrializarla como base de las hormonas sintéticas (6). Posteriormente, Rosenkranz desarrolló un proceso químico semejante al de Marker para producir otras hormonas como la testosterona y la desoxicorticosterona. Estos dos investigadores fueron parte fundamental en la empresa Syntex que en un tiempo fue la compañía precursora y líder de los esteroides en México. (6)
